Paderborn, June 14, 2018 – achelos GmbH sends a clear message to customers and partners through its membership in the GSM Association and its increasing focus on the mobile IoT segment with a team of experts. The GSMA bundles the interests of 800 mobile communications operators and 300 companies within the industry worldwide. In March 2018, achelos IoT participated in the Mobile World Congress of the GSMA in Barcelona. Launching the achelos IoT business under the slogan “security. connected.” the company demonstrates its dedication to IoT, offering flexible solutions for the challenges and developments surrounding the Internet of Things (IoT).

“achelos is established in various industries with a comprehensive IT and embedded security expertise. We are transferring this expert knowledge to IoT technology concepts for a broad range of applications.

We develop flexible solutions for SIM and eSIM* management relying on the GSMA standards. Thanks to our independence from (e)SIM manufacturers, our customers can enjoy true interoperability and create subscription and connectivity management services according to their individual business requirements. Through our GSMA membership we want to show a larger presence in the mobile IoT market as well as actively contribute our expertise in IT and embedded security, test management and software development in security-critical application fields to working committees within this industry organisation“, Kathrin Asmuth, managing partner of achelos GmbH, explains the direction of the IoT division.

achelos IoT offers solutions for the secure management of mobile connectivity (for SIM and eSIM*), tools for testing the robustness and conformity of digital communication protocols as well as development services for embedded systems.

* An eSIM is a SIM card embedded in a device to store network access data for the identification and authentication of a mobile subscriber or device.

About achelos GmbH:

achelos is a software development company founded in 2008 in Paderborn (Germany), delivering manufacturer independent solutions for embedded systems in security-critical application fields. achelos IoT is addressing the global IoT community and is offering the expertise that enables customers to build innovative solutions for this rapidly evolving market. Clients benefit from the strong expertise of achelos in embedded technology and security. The company offers solutions and services for the management of electronic identities and for safeguarding the compliance and robustness of communication channels. The services of achelos IoT cover the entire project lifecycle from design, development and security testing to deployment and operation.
