Paderborn, May 30, 2022 - achelos GmbH from Paderborn will present itself for the first time at the Hannover Messe from May 30 to June 2, 2022 at the NRW joint stand "Automation & Digital Factory" in Hall 11 | Booth A13/B13. Component manufacturers and system integrators in the automation industry are addressed. They need secure key management solutions for connected manufacturing to prove the authenticity of their hardware and software with high-quality electronic certificates. In this context, the company-wide self-operated public key infrastructure (PKI) forms the basis for maximum cyber security of intelligently connected devices, machines, and systems. The consulting and software development company presents a comprehensive portfolio for intelligently connected manufacturing at the trade fair and supports PKI projects in all phases.

In cooperation with partners such as Keyfactor or Utimaco, achelos offers complete key management solutions for setting up or migrating an existing public key infrastructure in your own company. The IT security experts accompany and support PKI projects holistically. This starts with system planning, continues with system deployment, and ends with secure operation.

"In recent years, we have planned and delivered key management solutions specifically for customers in the automation industry, as our customer story with Phoenix Contact shows. This has resulted in a portfolio tailored to this customer group, which makes us an attractive discussion partner for trade fair visitors from the automation industry," says Dr. Michael Jahnich, Director Business Development at achelos, looking forward to fruitful discussions at the Hannover Messe.

achelos is a certified integration partner of Keyfactor. The company is one of the global market leaders for highly secure PKI and certificate lifecycle management with a focus on secure machine identities.

Expert presentation in the conference section of the Hannover Fair

In his presentation, Michael Jahnich will provide information on how companies can use a company-wide PKI to prove the authenticity of their hardware and software by means of high-quality electronic certificates.

Key management solutions for networked manufacturing
